

Snow and Ice Control Program

During ice and/or snow events, the overall goal of the Maintenance and Operations Division is to provide safe street access to necessary, life-sustaining, essential services (such as Pullman Regional Hospital), focusing efforts in the most efficient way to assist the most drivers. City crews concentrate initial efforts on primary streets—streets that lead to those life-sustaining services. (*See table.*) It is of little benefit for streets leading to primary streets to be passable if primary streets are impassable.

Whenever possible, efforts are extended to secondary streets, including transit routes and other non-arterial streets with high-volume traffic, many of which are residential streets which is where the majority of the population can be found.

Finally, as time and conditions allow, all other paved streets, cul-de-sacs, unpaved streets, paved alleys and unpaved alleys that are not designated as primary or secondary streets are plowed. **Motorists are strongly urged to use the primary and secondary streets whenever possible to reach their destinations and are also encouraged to drive slowly, with caution and allow for plenty of stopping distance.**

A link to the complete snow and ice control program, including the table of secondary streets as well as information about the downtown business district, city sidewalks and parking lots, is posted on the city Web site home page www.pullman-wa.gov under Announcements.

Snow and Ice Control Primary Streets

Street	From	To
Bishop Blvd	Grand Ave	Main St
